SKL · COMPETENCE MEMO 2 OF 4

Gap Formalisation

Before any offer or price, the sales says the prospect's gap back to him in his own words, and the prospect confirms it.

Version: Memo 1.0 · 25 October 2026

Based on: Gap Formalisation methodology v1.3 (25 October 2026), with Annex A (bounding rules) and Annex B (calibration cases)

SOURCE OF TRUTH

---

1 In one sentence

> Gap Formalisation is the moment when the sales, before the first pitch and the first price, restates the prospect's problem and what that problem costs him, in the prospect's exact words, and the prospect validates that restitution.

The gap is the distance between where the prospect is today (point A) and where he wants to be (point B), the one problem that keeps him from closing that distance on his own (P), and what that problem costs him (COST).

Collecting these elements is discovery. Formalising them is the gap: making them explicit and agreed before the offer is presented. The gap belongs to the prospect, so it is built only from his words. A summary in the sales' own words, however faithful, is not his gap.

> **The gap formula**
>
> "You're at [A] · you want to get to [B] · and what's holding you back today is [P]." Then the cost of P, in the prospect's words.
>
> French version used in coaching: « Tu es à [A] · tu veux atteindre [B] · et ce qui te bloque aujourd'hui, c'est [P]. »

2 Its role in the call

Where it sits. Between the end of discovery (SPIN) and the first pitch. It must come before the first pitch *and* before the first price, whichever comes first. The pitch starts at the first description of the offer; an announced screen share counts as the start only if an offer description follows within two sales turns (GB-14).

What it receives from SPIN. The prospect's answers to the discovery questions. Each slot of the formula has one origin:

- **A** comes from his answers to Situation (S) and Implication (I) questions.
- **B** comes from his answers to Need-payoff (N) questions.
- **P** comes from his answers to Problem (P) questions.
- **COST** comes from what he said the problem costs him, or what staying where he is costs him.

What it hands to the pitch. An agreed problem and an agreed cost that the offer must answer, a measurable distance between A and B, and the list of the other blockers he named, which become the steps of his roadmap in the pitch.

Why the call fails without it. Without a validated restitution, the pitch has no agreed problem to solve and no agreed cost to weigh against. The price is then compared with nothing. This is why the absence of a gap scores 0, whatever was collected during discovery.

3 What it is for

For whom	What the gap gives
The prospect	He hears his own situation, in his own words, in one sentence. He feels understood, and he owns the problem because he said it and confirmed it. Often he adds something new when he confirms: a figure, an emotion, a person.
The sales	A shared starting point for the pitch: the offer answers the problem he named; the roadmap steps answer the other blockers he named; the price is weighed against the cost he stated. A correction at this moment is cheap; discovering a misunderstanding during the objections is not.
The decision	The prospect decides on the distance from A to B and on the cost of staying at A, both stated by him. A quantified cost (money, hours, months lost) is what the price will be compared with.

4 The golden rules

1. **No validated restitution of problem and cost before the pitch means no gap.**
   If, before the first pitch and the first price, the sales did not restate the prospect's PROBLEM and its COST and get the prospect's validation, the gap is absent and the call scores 0 on this competence. Elements collected in discovery do not save it.

2. **Say it back in his exact words.**
   Every restated component must contain the prospect's key expression for it, copied exactly. A paraphrase, a synonym, a summary in your own words or another word form ("stressed" restated as "stress") does not count, however faithful it is (GB-22).

3. **Only four changes are allowed.**
   Person shift (I → you, my → your, I'm → you're…), singular or plural of the same noun ("self-doubts" = "self-doubt"), and the way a number is written ("10K" = "10,000"). Nothing else: no synonym, no reordering, no other word form.

4 **His figures, never yours.**

A number counts only if the prospect said it. A figure you rounded, converted, annualised or computed is your figure, even if he approved it (GB-24).

5 **Never bring a cost he did not state.**

The cost must come from something the prospect said. A cost introduced for the first time in the restitution, or a heavier framing of a cost he played down, is untraced and does not count, even if he says "yeah" (GB-7, GB-18). A current income is never a cost.

6 **Fill the formula with the right A and B.**

A is the figure he wants to move, taken from his S or I answers, not the biggest figure of the call. B is his target in the same unit as A, taken from his N answers, with his deadline if he gave one (GB-28, GB-29).

7 **One single blocker.**

P is the blocker he named when you asked what stops him; otherwise the one he comes back to most (GB-30). The other blockers are not lost: they become the steps of his roadmap in the pitch. A 3-step roadmap needs at least 3 distinct blockers from his P or I answers; below that, the Copilot warns the sales before generating the roadmap page (GB-33).

8 **Stop and ask for his validation.**

End the restitution with a validation request ("Did I get that right?") and let him answer. Do not end it on a new question, and do not slide into the offer before he has answered (GB-5, GB-9).

9 **Take the correction, say it back, get a new yes.**

If he corrects a component, restate it with his correction, in his words, and get a new confirmation. A correction left unrestated means the gap is not validated (GB-25).

10 **Say it in one go.**

The problem and its cost are restated together, in one single restitution, then validated. If the elements of the gap are given in several pieces, with the prospect speaking in between (a prospect turn of 6 words or more), they are separate passages and are never added up: that is not a gap (GB-1, GB-2, GB-34).

5 Exclusion rules

These cases never count, whatever else is true. The first line is the absence rule; the others explain most absences.

Never counts as…	Case	Example
A gap	Problem and cost given in different passages, with the prospect speaking in between: pieces are never added up into one gap (GB-34).	"So the issue is marketing." Prospect answers at length. "And that's costing you sleep, right?" → two passages, no gap.

Never counts as…	Case	Example
A gap (absence rule)	No restitution containing PROBLEM and COST, validated by the prospect, before the first pitch and the first price. Score 0.	The prospect said "I've lost two years doing nothing", then the sales goes straight to "Let me share my screen".
A restitution	A single restated component, even closed by "right?". At least two components are needed (GB-4).	"So your goal is 10K a month, right?"
A restitution that can pass	Any restitution after the first pitch or the first price. It is recorded for coaching only.	A complete restitution given after the program screen share.
A component	A clause about another person: a former student, a testimonial, "most people in your position…" (GB-6).	"Amelia was exactly where you are, stuck at 2K…"
A component	A paraphrase: synonym, summary, other word form, no key expression found in both the prospect's turn and the sales' clause.	Prospect: "I've lost so much time." Sales: "… you've wasted years on this."
A component	Content first said by the sales and only approved, including setter's notes and CRM summaries (GB-19).	"And I imagine that's costing you sleep." "Yeah."
A figure	A number rounded, converted or computed by the sales.	Prospect: "about 1,800 a month". Sales: "you're at roughly 2K".
A cost	A current income, a price, a budget.	"You make 4K at your job."
The selected A	The biggest figure of the call when it is on another dimension than B (past income, savings, budget).	"You used to make over 100K and you want to get back there."
The single P	A list of blockers restated together as what holds him back. It is "several blockers".	"…what's holding you back is self-doubt, fear of change, and not knowing the next step."
A validation	The answer to another question asked at the end of the restitution.	"…and how many hours a week could you put in?" "Probably 10."
A validation	A reaction that comes after the sales has already mentioned the offer.	"…and that's exactly what we help with." "Yes."
A validation	A corrected restitution that the sales did not restate.	"It's more like 3K." "Got it. So let me show you the program."
A key expression	Generic words only: thing, stuff, something, everything, way, lot, life, people, good, bad, better, hard, easy, want, feel, like, make, get, know, think, really, just, kind, sort, able.	"You want to…", "a lot of things"

Two things do **not** disqualify a restitution: a validation tail ("…, right?") at the end of a passage with two components or more, and a restitution spread over several sales turns separated only by short approvals ("yeah", "mm-hmm"), which is one restitution.

6 How to judge it from a transcript

1. **Mark the window.** Find the start of discovery and the first pitch or the first price, whichever comes first. Only what happens inside this window can make the gap exist.
2. **List the prospect's raw material.** In the prospect's turns, underline his current state (A) in S and I answers, his target (B) in N answers, his blockers in P answers, and what he said they cost him. Copy his exact words. Strike out anything the sales said first and he only approved.
3. **Select A, B and P before reading the restitution.** A: his current value on the dimension B targets. B: his target in A's unit, with his deadline if any. P: the blocker he named when asked what stops him; otherwise the one he comes back to most. This way the sales' choice never decides what the right A, B or P is.
4. **Find the restitution.** Look for a sales passage that plays back the prospect's situation: an opener ("So from what I'm hearing", "Let me play that back"), a long passage of "you... your...", or a validation request ("Did I get that right?"). It ends at the first prospect turn of 6 words or more, at a new topic, or at the first word of the offer.
5. **Check each clause, word by word.** For each clause, find the prospect's key expression in an earlier prospect turn and in the sales clause, with only the four allowed changes. Verbatim: it is a component. Paraphrased or invented: it is not. A restitution needs at least two components.
6. **Check the gate components.** Is PROBLEM there, verbatim? Is COST there, verbatim, and is it a real consequence (not an income, not a sales framing)?
7. **Read the prospect's answer to that restitution.** Confirmed with content, confirmed, corrected, rejected, or none. If the sales ended on another question or moved to the offer first, there is no validation. If corrected, look for a new restitution with his correction and a new confirmation.
8. **Decide the gate, then score.** All checks pass: the gap is present, score the six items. One check fails: the gap is absent, score 0, and note the main reason.

What the verdict looks like

Step 1: the absence gate. Three conditions, checked in order: (1) a restitution exists before the first pitch and the first price; (2) it restates PROBLEM and COST, each verbatim; (3) the prospect confirmed it, with or without content, or corrected it and then confirmed the restated version. If one fails, the verdict is **Gap absent, score 0**, with one main reason in this priority order:

Reason	Meaning
No restitution	Nothing was played back before the pitch.
Restitution after the pitch	A restitution that would pass exists, but only after the first pitch or price.
Problem missing	No verbatim PROBLEM in any pre-pitch restitution.
Cost missing	No verbatim, prospect-sourced COST in any pre-pitch restitution.
Not validated	No confirmation, an answer to another question, or a correction not restated.

For an absent gap, the items are still shown as a diagnostic ("elements collected but not formalised"), never as a score.

Step 2: the score of a present gap. Six items, each at level 0, 1 or 2. Call score = sum of (weight × level ÷ 2), rounded, out of 100. A gap that passes the gate scores at least 25.

Item	Weight	Level 1	Level 2
G1 Point A	10	A stated by the prospect in S or I answers, not quantified	A quantified by the prospect, on the dimension B targets
G2 Point B	10	B stated by the prospect in N answers, not quantified	B quantified by the prospect in A's unit, with a horizon
G3 Measurable gap	10	(no level 1)	Quantified A and B in the same unit; the distance can be computed
G4 Cost of the problem	20	Cost stated by the prospect in a concrete domain, not quantified	Cost quantified by the prospect (money, hours, months lost)
G5 Restitution quality	25	PROBLEM and COST verbatim, but the formula is incomplete: A or B missing, not verbatim or not the selected ones; several blockers; or another blocker than the selected P	Complete formula: selected A, selected B, the single selected P and the COST, all verbatim, with at least one key expression of 3 words or more or a prospect figure
G6 Validation	25	Plain confirmation, or corrected then confirmed	Confirmed with content of the prospect's own

Level 0: G1 and G2, no statement by the prospect; G3, no quantified A and B in the same unit; G4, the prospect's cost stays generic ("it's hard"). G5 and G6 cannot be at 0 once the gate passes. Weights are proposals, to be validated.

Two quotes for the top level. A level 2 needs two quotes: G4, the prospect's quantified cost quote; G5, for each of the four components, the sales quote and the prospect source quote containing the same key expression; G6, the prospect quote showing what he added.

Example. A gap passes the gate. A is quantified (G1 = 2), B is stated without a figure (G2 = 1), so no measurable gap (G3 = 0), the cost is concrete but not quantified (G4 = 1), B is missing from the restitution (G5 = 1), plain "yes" (G6 = 1). Score: 10 + 5 + 0 + 10 + 12.5 + 12.5 = 50.

Mastered · 85 to 100
Executed correctly on almost every call.

Developing · 60 to 84
Executed, with recurrent gaps.

Needs work · 0 to 59
Not executed reliably.

Floor rule. If any item has a level-2 rate below 25 % over the period, the competence cannot be rated above Developing, whatever the score. The period score is the mean of the call scores.

7 Practical cases: well executed vs poorly executed

Real excerpts are copied exactly from Valentino's calls (Interior Academy, June to October 2026), transcription errors included. Illustrative excerpts are written for this memo and never presented as real. Expected verdicts on real calls are proposals still to be confirmed by blind annotation.

Case 1 · Before the pitch, not after (rule 1)

Discovery is over. The prospect has named his blocker and what it costs him.

WELL EXECUTED

SALES "So you're at 2K a month, you want to get to 10K a month, and what's holding you back today is confidence. And you told me it's cost you three years. Did I get that right?"

PROSPECT "Yeah, exactly."

SALES "Great. Let me show you how we'd work on that."

Why: The restitution with PROBLEM and COST is confirmed before any word about the offer. The gate passes.

Illustrative

POORLY EXECUTED

SALES "Do you want me to show you how we can do that? . One second, let me make this full screen here." (T086)

SALES "And if nothing changes, and we aren't able to do that, you stay exactly where you are, and that's a nightmare. Did I get that right?" (T090)

Why: The restitution is good and confirmed, but it comes after the screen share that opens the pitch. Gap absent, reason "restitution after the pitch".

Real call 027 · T086, T090

Case 2 · His words, not a summary (rule 2)

Call 049. The prospect had said: "But come home miserable, bring that to the house. It's not, stressed, not sleeping well." (T131). Call 001. The prospect had said he was "stressed" (T050) and: "It's like my motivation gets, you know, I basically don't have any." (T052)

WELL EXECUTED

SALES "if nothing changes, you end up working for somebody else, coming home miserable, stressed, depressed, and not sleeping well. Have I got that right?"

PROSPECT "Pretty much. Yes."

Why: "miserable" and "not sleeping well" are his exact words. Every component of this restitution is verbatim; G5 can reach level 2.

Real call 049 · T148, T149

POORLY EXECUTED

SALES "There's been a lot of stress. And it's obviously impacting your level of motivation, your drive, your willpower, your entire self, as well as the people around you."

Why: "a lot of stress" does not count: he said "stressed", another word form. Only "motivation" saves the COST. The gap passes here, but on one word; the drive, willpower and people around him are the sales' additions.

Real call 001 · T081

Case 3 · The same word, not a cousin (rule 3)

Call 035. Earlier, the prospect had said her work was "not going to fulfill" her (T075).

WELL EXECUTED

SALES "And if nothing changes, you'll be in a job that's not going to fulfill you. Is that fair?"

Why: "not going to fulfill" is her expression; only "me" became "you" (person shift).

Illustrative

POORLY EXECUTED

SALES "And if you don't, you're going to have to work in something that might damage your body, it might be unfulfilling, and it'll make the rest of your years unhappy."

Why: "unfulfilling" is another word form of "fulfill": not verbatim. "damage your body" was never said by her: untraced. No COST counts, and there is no PROBLEM in the passage. Gap absent, reason "problem missing".

Real call 035 · T092

Case 4 · His figures, never yours (rule 4)

Call 045. The sales did the maths during discovery: "Six times five works out to roughly, what, $30,000 that you would then have been able to attribute to that savings" (T064). The prospect approved (T065).

WELL EXECUTED

SALES "How much would you say this has cost you so far?"

PROSPECT "Honestly, probably 30K over the last five years."

SALES "...and in your words, it's probably cost you 30K over the last five years. Did I get that right?"

Why: The figure comes out of the prospect's mouth first, then is restated as he said it.

Illustrative

POORLY EXECUTED

SALES "And that's the pattern which has prevented you from making progress. And that's potentially already cost you 30K, maybe more."

Why: The 30K was computed by the sales and only approved. It is the sales' figure: it is not a COST component and never counts for G4. The turn also ends on a new question, so there is no validation.

Real call 045 · T094

Case 5 · Never bring a cost he did not state (rule 5)

Call 024. Asked what staying as she is would mean, the prospect said: "I don't think. It would necessarily be bad, and maybe that's part of the self-limiting belief system" (T060).

WELL EXECUTED

SALES "You said it wouldn't necessarily be bad. So what would it cost you to still be doing this in two years?"

PROSPECT "I'd feel like I wasted my degree."

Why: The sales goes back to discovery and lets her state her own cost. "wasted my degree" can then be restated verbatim.

Illustrative

POORLY EXECUTED

SALES "And if you are not able to work through that, you will be selling for a life that you know deep down you don't actually want. Did I get that right?"

Why: The "settling" frame was introduced by the sales earlier, and the prospect had played the cost down. The COST is untraced; the gap cannot pass.

Real call 024 · T103

Case 6 · The figure he wants to move (rule 6)

Call 078. Sales: "How much are you making right now compared to what you used to?" Prospect: "$87,000, and I made over $100,000 when I – but, I mean, part of it is moving from New York to Florida" (T046). Later: "the 87 that I'm making now, but ideally if I can meet to where we're at a hundred, we would be in a better position." (T106)

WELL EXECUTED

SALES "So you're at $87,000, ideally you want to be at a hundred, and what's holding you back today is..."

Why: A is the current income he wants to move; B is his target in the same unit (yearly income). A and B are his figures; the gap is measurable (G3).

Illustrative, built on real call 078 · T046, T106

POORLY EXECUTED

SALES "So you used to make over 100K and you want to get back there..."

Why: "over $100,000" is the biggest figure of the call, but it is a past income, not where he is today. It is not the selected A: G5 cannot reach level 2.

Illustrative

Case 7 · One single blocker, the rest goes to the roadmap (rule 7)

Call 024. Sales: "what do you think has held you back in" Prospect: "I think one, maybe limiting self-beliefs or having self-doubts. Two, change is scary. And three, not knowing what the next step is." (T041, T042)

WELL EXECUTED

SALES "...and what's holding you back today is having self-doubts."

Why: One blocker, in her words, provided it is the one she comes back to most (to be counted by the annotators). "change is scary" and "not knowing what the next step is" become two steps of her roadmap: three distinct blockers, no Copilot warning.

Illustrative, built on real call 024 · T042

POORLY EXECUTED

SALES "...what's holding you back is self-doubt, fear of change, and not knowing the next step."

Why: A list of blockers restated as what holds her back: "several blockers", G5 capped at level 1. Note also that "fear of change" is not her expression: she said "change is scary".

Illustrative

Case 8 · Ask for validation, not for something else (rule 8)

Call 129. The sales has just restated the problem and the cost, then continues in the same turn.

WELL EXECUTED

SALES "...and you said it's cost you seven years. Did I get that right?"

PROSPECT "Yes. And honestly, my husband doesn't believe in it either."

Why: The restitution ends on a validation request and the prospect answers it, adding something of her own: confirmed with content, G6 = 2.

Illustrative

POORLY EXECUTED

SALES "If you time seven by 12, I'm not the best at maths, but that's... think that works out to roughly, 12 times 12 is 144"

PROSPECT "12 times 7 is 84."

Why: The restitution ends on an arithmetic question. The prospect answers the calculation, not the restitution: no validation. (The computed total would also be the sales' figure.)

Real call 129 · T088, T089

Case 9 · Let him answer before you speak about the offer (rule 8)

The sales has played back the situation and wants to move on.

WELL EXECUTED

SALES "Are we on the same page or am missing something, Becky?"

PROSPECT "No, that's it. And there's also then, I guess, a presumption on my part that there is a resource that can do that."

Why: "No, that's it" answers "missing something?" and is a confirmation; she then adds a new element of her own. Confirmed with content.

Real call 040 · T099, T100

POORLY EXECUTED

SALES "So that's where I see the biggest gaps for you in terms of how our program could potentially help is helping you find those clients"

PROSPECT "Yes."

Why: The offer words come first ("how our program could potentially help"), so this "Yes." reacts to the offer, not to a restitution. In this call, the validated restitution is the earlier one (T079, "Yes." at T080).

Real call 005 · T081, T082

Case 10 · Take the correction and say it back (rule 9)

The prospect does not fully agree with the restitution.

WELL EXECUTED

PROSPECT "Not quite, it's more like 3K, not 4K."

SALES "Got it, 3K, and you want 10K, and what's holding you back is confidence, and it's cost you three years. Right?"

PROSPECT "Exactly."

Why: The correction is restated with his figure and confirmed: the gate passes on the second restitution, G6 = 1.

Illustrative

POORLY EXECUTED

SALES "It's something we like, but it's not what we want. You know what I mean? Does that resonate?"

PROSPECT "Well, yes and no. Actually, because I'm a very spiritual person. So I believe God called me to teach."

Why: The prospect corrects a component. The sales then moves to the income needed (T097) without restating it: the correction is lost and the restitution cannot pass.

Real call 008 · T095, T096

Case 11 · Two components, about him (rules 1 and 2)

The sales wants to show the prospect he is understood.

WELL EXECUTED

SALES "You're stuck at 2K, like Amelia was, and what's holding you back is not having clients, and it's cost you two years. Fair?"

Why: The clauses are about the prospect; the comparison with Amelia is ignored. Three components, including PROBLEM and COST.

Illustrative

POORLY EXECUTED

SALES "It sounds like the biggest thing is you just haven't found anyone that can actually just hold your hand through that process to teach you the design skill"

Why: One component (PROBLEM), no cost: not a restitution. The "got that right?" in the next turn is a transcription bleed into the prospect's turn and adds nothing. In this call, the later restitution (T092) has no PROBLEM, and the problem said here is not pooled with it.

Real call 035 · T076

8 Edge cases and common confusions

Situation	Decision
"No" answering "Did I miss anything?"	Confirmed ("No. Cool.", real call 001 · T082). With an added element, confirmed with content.
"Pretty much", "more or less"	Confirmed (real call 049 · T149).
"99 %, except it's more like 3K"	Corrected: the sales must restate with 3K and get a new confirmation.

Situation	Decision
Emotional reaction without disagreement ("Why do you have to go saying that?", tears)	Confirmed with content: he owns the problem. With an explicit disagreement, rejected.
The prospect repeats the sales' words back ("yes, I'm stuck in the hamster wheel" after the sales said it)	Confirmed, not with content: the added content must be his own.
"In your words...", "as you said..."	The marker alone proves nothing; the key expression must still be there. With it, it is a coaching strength.
Restitution spread over two sales turns with a "yeah" in between	One restitution. A prospect turn of 6 words or more in between makes two, never pooled.
Restitution followed, in the same turn, by "and that's exactly what we help with"	The restitution ends at the first offer word; the next answer is a reaction to the pitch, unless the sales asked for validation first.
Restitution after the first pitch but before the first price (real call 014 · T139)	Cannot pass the gate (current proposal, to be validated).
Screen share announced, offer described a few turns later, restitution in between (real call 098 · T228 to T236)	The pitch starts at the screen share only if an offer description follows within 2 sales turns. Call 098 is a boundary case, to be confirmed.
Components taken from setter's notes or CRM summaries (real call 068)	Not his words. They count only if the prospect, in his validation, states them again in his own words.
Follow-up call where the pitch resumes	The gap must be restated and re-validated in this call, before the pitch resumes; sources may come from the first call. Real call 090: no restitution, gap absent.
The call ends before any pitch or price	Scored on the restitutions of the call; the absence rule applies at the end of the call.
A co-decider (spouse, partner) answers the restitution	Valid if the restitution was addressed to that person. A turn whose speaker is doubtful can be neither a restitution nor a validation.
Same component said several times by the prospect	Any of those statements can be the source; one verbatim source is enough.
Target stated outside an N answer	Recorded but not used as B (to be validated).
Two clauses on the same blocker	One blocker, not "several blockers".
Prospect's current income presented as what the problem costs	Never a cost.
Prospect stated problem and quantified cost but no restitution (real call 023)	Gap absent, reason "no restitution". Diagnostic: material collected but not formalised.

9 Glossary

Gap	The distance from A to B, the problem that blocks it, and the cost of that problem, stated by the prospect.
Point A	Where the prospect is today: the figure he wants to move, from his S or I answers.
Point B	Where he wants to go: his target in A's unit, from his N answers, with his deadline if any.
PROBLEM (P)	What keeps him from reaching B: a lack, a blocker, a fear, a past failure, a constraint. One single blocker is restated.
COST	What the problem, or staying where he is, costs him: money, time, clients, family, health, self-belief, lost opportunity.
Restitution	A sales passage that restates at least two components, each with the prospect's key expression.
Key expression	The prospect's words that carry a component, repeated exactly by the sales (only person shift, singular/plural and number writing allowed).
Verbatim / paraphrased / untraced	Key expression found in both texts / a link to a prospect statement but no shared expression / no prospect source at all.
Validation	The prospect's answer to the restitution: confirmed with content, confirmed, corrected, rejected or none.
Absence gate	The binary check (PROBLEM + COST, verbatim, validated, before pitch and price) that decides if the gap exists.
Unit	The dimension of A and B (monthly revenue, clients, hours per week, status, date).
Horizon	The deadline attached to B: binding (external, verifiable) or wished.
Roadmap blockers	The distinct blockers stated in P or I answers before the pitch; each becomes a step of the roadmap.
Copilot warning	The alert to the sales when there are fewer blockers than roadmap steps. Never changes the score.
Prompted by the sales	Content said first by the sales and only approved by the prospect. Never the prospect's statement.
S, I, N, P answers	The prospect's answers to Situation, Implication, Need-payoff and Problem questions (SPIN).

10 Open points

- Whether a restitution between the first pitch and the first price can pass the gate (proposal: no).
- Verbatim threshold: one exact head word is enough for the gate, 3 words or a prospect figure for G5 level 2; a stricter rule (3 words for every component) is to be tested.
- The list of allowed transformations (person shift, singular/plural, number writing) and nothing else.

- A target stated outside an N answer is not used as B.
- The tie-break when two blockers come back equally often (proposal: the first named to the stopping question, then the most recent).
- Whether the selected P counts as one of the 3 roadmap blockers (proposal: yes, to be confirmed).
- The six weights (10 / 10 / 10 / 20 / 25 / 25), and whether B without a horizon can reach level 2 (proposal: no).
- The follow-up call rule (re-validation required where the pitch resumes).
- The recommended order A → B → P, not checked.
- The share of Valentino's calls that pass the gate is unknown: it is the first figure to establish.
- All real-call verdicts in this memo are proposals until two annotators confirm them blind.
- **Source inconsistencies to settle.** (1) Real call 129: after the restated restitution (T090), the prospect said "Why do you have to go saying that?" (T091). Rule GB-17 calls this exact reaction confirmed with content, yet the calibration verdict for the call is "not validated". (2) Real call 098: the calibration case puts the restitution after the pitch from the announced screen share (T228), but rule GB-14 starts the pitch at the screen share only if an offer description follows within 2 sales turns (the description comes at T236). (3) Real call 024: the formula case says G5 is capped at 1 for several blockers, but the same restitution cannot pass the gate (cost untraced), so G5 is never scored; it is also unclear whether a paraphrased second blocker ("fear of change" for "change is scary") counts toward "several blockers".
