Pitch

One blocker, one mechanism, four steps built from his own words. Then his roadmap, then the amount, then the decision.

Version: Memo 1.0 · 25 October 2026

Based on: Pitch scoring methodology v2.0 (with Annex A bounding rules and Annex B calibration set)

SOURCE OF TRUTH

---

1 In one sentence

> The pitch answers the one blocker the prospect validated in the gap, with the one mechanism of the offer that carries that blocker's name, in a four-step staircase made of his own words: his blocker, the mechanism, his transformation, a proof that started where he starts.

The pitch is the part of the call where the sales presents the offer. It runs from the first sentence that describes the offer (or the start of the screen share of the program) to the first price. If no price is given, it runs to the first decision request, or to the end of the call.

The pitch no longer covers everything the prospect said. It treats **one** blocker. His other blockers are not ignored: they become the steps of his roadmap, which comes after the four steps and before any price.

One test decides everything: **this pitch is only true for him**. If a step could be said word for word to any other prospect, it is generic.

2 Its role in the call

Where it sits. After the gap, before the price and the decision. The order of the whole end of the call is fixed:

Order	Moment	What happens
Before	Gap (competence 2)	The sales restates the gap; the prospect validates it in his own words. The validated blocker is **P**.
1	Step 1 · Restate the blocker	His blocker P, in his exact words.
2	Step 2 · The mechanism	The one mechanism of his blocker, as a principle he can repeat, then the phase of the offer that carries it.

Order	Moment	What happens
3	Step 3 · The transformation	From his A to his B, in his unit, ending with an image of his life in his words.
4	Step 4 · The proof	A real client case, with consent, that started where he starts.
Then	Roadmap	His other blockers become the steps of his one-page roadmap. No price on it.
Then	The amount	The price of the offer, for the first time.
Then	The decision	The decision request. What follows (reserves, objections) belongs to competence 4.

What it receives. From the gap: the validated blocker P (the prospect's exact quote), his point A and his point B with his figures and his unit, his deadline if he gave one, his words about the life he wants, and the list of his other blockers.

What it hands on. To the roadmap: the blockers not treated in the pitch. To the decision: a prospect who has heard his own problem, one reason it gives way, his own destination and someone like him who got there. To the Objections competence: any reserve he raises after the pitch start.

Why the call fails without it. Without a pitch built on his P, the offer is a catalogue. The prospect hears modules, not the answer to what stops him. The price then arrives with nothing of his attached to it, and the decision becomes a question of money instead of a question of his blocker.

3 What it is for

- **For the prospect.** He recognises himself. He hears his own blocker, understands in one sentence why it gives way, sees his own B and meets someone who started where he is. He can repeat the mechanism to his partner after the call.
- **For the sales.** A short, fixed path: four steps, one to three sentences each. No need to present the whole program. Every sentence comes from what the prospect already said, so nothing has to be invented.
- **For the decision.** The decision is taken on his blocker and his roadmap, not on a list of features. The price comes last, after he has seen what each step of his roadmap brings him, computed with his own figures.

The offer: 9 blockers, 9 mechanisms

The offer has nine mechanisms. Each one answers one blocker and carries its name. The mechanism of the pitch is the one whose name matches the category of his validated P. The category is decided by **what the prospect doubts**, in his words.

Blocker = mechanism	The prospect's sentence, typically	What he doubts (boundary test)
Skill	"can I actually do this?"	His ability to do the design work ("I'm not good enough")
Legitimacy	"who will hire me without experience?"	Being chosen without experience or credentials ("I have no portfolio", "I'm not certified")

Blocker = mechanism	The prospect's sentence, typically	What he doubts (boundary test)
Pricing	"I don't know what to charge"	What to charge
Acquisition	"I don't know where clients will come from"	Where clients come from (marketing, visibility, leads, "getting the clients")
Selling	"I don't know how to turn a conversation into a client"	Turning a conversation into a client (sales calls, proposals, closing a deal)
Delivery	"I'm not sure I can run a client project end to end"	Running a project end to end (process, contracts, suppliers, client management)
Time	"I only have a few hours a week"	The hours available
Past failure	"I took a course and nothing happened"	An earlier course or attempt that produced nothing
Financial risk	"what if it doesn't work?"	The risk that the investment does not pay off

> **To be provided (à confirmer): the content of the nine mechanisms.**
> For each mechanism, the offer owner must still write its principle in one sentence the prospect can repeat, the phase of the offer that carries it, and its typical words. Until then, step 2 is judged on the category only (is it the mechanism of his blocker, and only that one?). The illustrative cases of this memo show the principle as a bracketed slot on purpose: no principle is invented here.

When a P fits two categories, the category of the words the prospect used wins: "I don't know how to get clients" is Acquisition, even if the sales hears a selling problem. A lack of money to pay for the program is not a pitch blocker (it is a decision fact or an objection). A P that fits none of the nine (a fear, overthinking) has no mechanism: it is sent to the arbiter and step 2 is not judged (PB-27).

The roadmap: the client page

The roadmap is a one-page client page, shared on screen at the end of the call, then sent by private link. One step per blocker he named, in the order in which they must fall (order rule to be validated; proposal: the order of the nine-blocker table).

Block	Content
Today	His point A, quantified, with his sentence, and what the status quo costs him over one year
Step 1	His blocker (verbatim) · 2 deliverables of the Academy · one proof · what it brings him, with the calculation · a first win within 30 days
Step 2	Next blocker · same headings · the milestone rises
Step 3 (or 4)	Last blocker · the last milestone equals his objective
His objective	His point B · the gain per year and his other gains: time, confidence, credibility, security, freedom

Each value is computed with his figures (price per project, hours, inquiries, signing rate). A missing figure is shown in small type as **"To ask"**, and the sales asks him live. The link can be copied only when every check is green: capacity held at each milestone; client flow explained; objective respected (the last milestone equals B); values that add up; **no price of the offer**; no link (meaning to be validated); 3 or 4 steps; fits on one screen; starting point chosen. Informative checks do not block: a step without proof is counted in Proof gaps. A 3-step roadmap needs at least three blockers named by the prospect; below that, the sales is warned before the page is generated.

4 The golden rules

1. **Pitch only after the yes.**
   The offer is presented only once the prospect has validated the gap. A one-sentence answer to a direct question ("so what is it?") followed by a return to discovery is allowed; a description of the offer before the validation is not (PB-37).

2. **One blocker: the one he validated.**
   The pitch treats the P validated in the gap, alone. His other blockers wait for the roadmap. Restating several blockers, or another blocker in its place, cannot reach the top level.

3. **One mechanism: the one that carries his blocker's name.**
   State it as a principle he can repeat in one sentence, then name the phase of the offer that carries it. Never add a second mechanism, never recite the content of the offer.

4. **Four steps, in order, one to three sentences each.**
   1 blocker, 2 mechanism, 3 transformation, 4 proof. Short sentences, natural when spoken. A step longer than three sentences fails brevity (tolerance to be validated).

5. **His words, his unit, his date.**
   Step 1 uses his exact words, not a translation. Step 3 goes from his A to his B in his unit (his euros, his hours, his clients), uses his deadline only if he gave one, and ends with a concrete image of his life once there, in his words.

6. **A real proof that started where he starts.**
   A real client case from the case library, cited with the client's consent, whose starting point resembles his A. Not the best case: the closest one. If no case matches, the slot stays empty. A case is never invented.

7. **Only after: roadmap, then amount, then decision.**
   His other blockers become the steps of his one-page roadmap. Then the price. Then the decision request. Neither the pitch nor the roadmap page gives the price.

8. **This pitch is only true for him.**
   Every step must contain something only this prospect said: his key expression, his figures, his words, a case matched on his starting point. A step that fits any prospect is generic and capped below the top level.

9 **Nothing outside his gap or the offer, and the Academy never does his work.**

Every figure, case, price or guarantee must come from his gap or from the offer reference and case library. Never say the Academy will run his business, find or sign his clients, or deliver his projects. The Academy brings systems, feedback and coaching; he runs his business.

5 Exclusion rules

Never counts as…	Case	Example
A compliant pitch (score 0)	Pitching before the yes: the pitch starts before the gap is validated, or the gap was never validated	Screen share and offer description at T140, restitution validated at T150
A compliant pitch (score 0)	A claim outside his gap or the offer: a figure, case, price or guarantee found neither in his quotes nor in the offer reference or case library	"Our students make 15K a month on average." (figure not in the offer reference)
A compliant pitch (score 0)	A promise that the Academy does his work: runs his business, finds or signs his clients, delivers his projects. Conditional forms count too	"We'll find the clients, you just do the design."
A pitch start	A short answer to a direct prospect question, followed within two sales turns by a return to discovery (an offer mention)	"It's a six-month mentorship, I'll show you everything in a bit. So how long have you been doing this?"
Step 1	A paraphrase of his blocker in the sales' vocabulary; a restatement made only in the gap restitution and not after the pitch start	P: "I don't know where clients will come from." Sales: "So your lead generation is the issue."
Step 2	A second mechanism; a recitation of three or more components without tying them to the principle (threshold to be validated)	"...and module 4 is pricing, module 5 is contracts, module 6 is the community"
Step 3	A unit that is not his; a deadline he never gave	A "2K a month", B "10K a month". Sales: "from where you are to six figures by next summer"
Step 4	A case not in the library, a case without consent, an invented case (it is also a claim outside the offer)	"One of our students hit 40K in her third month" (not in the library)
The roadmap	A roadmap shown after the price, or whose steps are not his named blockers	Price given right after step 3, roadmap never shown

Never counts as…	Case	Example
A price	The income of a student, a price per project he could charge, an ad budget, a software cost, an amount said by the prospect, a hypothetical amount	"Our students charge 800 to 1,000 per room."
Adhesion	Approvals and compliments; price or logistics questions without projection (buying signals); content first stated by the sales and only approved	"That sounds amazing." · "When does it start?"

6 How to judge it from a transcript

1. **Find the validated P.** Take it from the Gap result of the call: the blocker restated in the restitution that the prospect validated, and its turn. Write down his exact quote and its key expression. If the gap was never validated, any pitch is non-compliant.
2. **Place the pitch start.** The first sales turn that describes the offer (content, format, duration, support, guarantee, outcome), or that announces a screen share followed within two sales turns by a description. A short answer followed by a return to discovery is only an offer mention. Check that the pitch start comes **after** the validation turn.
3. **Place the end markers.** The first price for the offer (not a student's income, not a price per project, not a hypothetical amount), the start of the roadmap and the first decision request.
4. **Classify P.** Ask what he doubts, in his words, using the nine boundary tests. Note the category, or "fits none" (sent to the arbiter).
5. **Find the four steps** after the pitch start. Step 1: does it contain his key expression for P, and only P? Step 2: which mechanisms are stated as a principle or a phase before the roadmap; is it exactly one, the one of his category? Step 3: are A and B his, in his unit, with his deadline only if he gave one, and is there an image of his life in his words? Step 4: is the case in the library, with consent, and does its starting point match his A?
6. **Check order and brevity.** Step 1 < step 2 < step 3 < step 4 < roadmap < price < decision request, on turn numbers. Count the sentences of each step (one to three). A step repeated later does not break the order: the first occurrence counts.
7. **Read the roadmap.** Are its steps his other named blockers, in his words? Does it come before the price? Does it show no price?
8. **List every claim** between the pitch start and the decision request: each figure, client case, price and guarantee. Is each one found in his quotes, the offer reference, the case library, or a calculation on those figures shown as such? Note every sentence where "we", the team or the Academy runs his business, finds or signs his clients, or delivers his projects.
9. **Find adhesion** in his words: appropriation, concrete projection, or a new link he makes himself. Note the sales gesture just before each one.
10. **Apply the test "only true for him"** to each step. Then decide: first the compliance gate, then the items.

Principles that apply throughout (common to the four competences): every piece of evidence is an exact quote from the right speaker in the right turn; an approval ("yes", "exactly", "right") proves only an agreement; content the sales said and

the prospect only approved never counts as his words, except a word he had already said that the sales reuses; a top level needs two distinct quotes.

What the verdict looks like

First, the compliance gate. Three checks, in this order: pitch after the yes; nothing outside his gap or the offer; no promise that the Academy does his work. If any one fails, the pitch is **non-compliant and the Pitch score is 0** for the call, with the reason shown. The items are still read and shown for coaching, never as a score. (Severity to be validated: the alternative is a cap at 40 instead of 0.)

Then, for a compliant pitch, seven items, each at level 0, 1 or 2. Call score = sum of (weight × level ÷ 2), on 100. Weights are proposals, to be validated.

Item	Weight	Level 2 (top)	Typical level 0
K1 Step 1 · Blocker restated	15	The validated P alone, verbatim (his key expression)	No restatement, or a paraphrase
K2 Step 2 · The mechanism	20	The mechanism of P's category, alone, as a principle in one sentence, then the offer phase carrying it	None, the wrong one, or two or more
K3 Step 3 · The transformation	15	A → B in his unit with his figures, his deadline only if he gave one, ending with an image of his life in his words	No A → B, another unit, or an invented date
K4 Step 4 · The proof	15	A real library case, with consent, whose starting point matches his A	No client case
K5 Order and brevity	10	All four steps, in order, one to three sentences each	Fewer than three of the four steps
K6 Then: roadmap, amount, decision	15	Roadmap after step 4 made of his other blockers in his words, then the amount, then the decision	No roadmap, or price before the roadmap
K7 Adhesion	10	Two or more adhesion passages, or one with a concrete projection (a date, a number, a named first action)	No adhesion

Level 1 in short: K1 his words but with other blockers, or another blocker; K2 the right mechanism alone but without the one-sentence principle or the phase, or followed by a recitation; K3 his A → B without the image of his life (or an image not in his words); K4 a real case whose starting point does not match (the best case); K5 steps present but out of order or too long; K6 roadmap before price but not made of his blockers, or decision before price; K7 one adhesion passage.

Mastered · 85 to 100
Executed correctly on almost every call.

Developing · 60 to 84
Executed, with recurrent gaps.

Needs work · below 60
Not executed reliably.

- **"Only true for him" cap.** K1 to K4 reach level 2 only if the step contains something only this prospect said. K2 reaches level 2 only after a K1 that does. A generic step is capped at level 1.
- **No matching case.** If the library holds no case whose starting point matches his A, step 4 is not judged (the sales must not invent one) and the call is counted in Proof gaps. K4's weight is spread over the other items. If there is no case library at all, step 4 is not judged either.

- **P outside the nine.** Step 2 is not judged; its weight is spread over the other items; the case is reported to the methodology owner.
- **Applicability.** No pitch start (only an offer mention): not applicable. A pitch resumed in a second call: scored, but the gap must be validated again in that call first.
- **Floor rule.** Over a period, if any item reaches level 2 in fewer than 25 % of calls, the competence cannot be shown above Developing, whatever the score.

7 Practical cases: well executed vs poorly executed

> **About the real excerpts.**
> All real calls in the calibration set (Valentino, Interior Academy, June to October 2026) were made before the "9 blockers, 9 mechanisms" board existed. No real call follows the four-step staircase yet. Real excerpts are used only where they genuinely illustrate a rule: offer mention versus pitch start, a pitch before the gap, a blocker restated in the sales' vocabulary, a price before any roadmap, generic personalisation, adhesion. Everything else is labelled Illustrative and must never be quoted as a real call. Real quotes are copied exactly, including transcription errors.

Case 1 · Pitch only after the yes (rule 1)

Real side: about six minutes into the call, during discovery. The prospect has said she wants "formal training" and "a certification"; no gap has been restated or validated.

WELL EXECUTED

SALES "So if I sum up: what's stopping you is that you don't have formal training behind you. Is that it?"

PROSPECT "Yes, that's it, I want a paper behind it."

SALES "Then let me show you how that gives way. Can you see my screen?"

Why: The gap is validated first, in her words. The screen share and the description of the offer come only after the yes.

Illustrative

POORLY EXECUTED

SALES "We're not accredited in terms of the qualifications that you get from us. The main focus of what we do is taking you from where you're at now to essentially running your own interior design business."

Why: The offer is described (its outcome, what it is not) before any gap exists. By the letter of the rules this is a pitch start, so the pitch would be non-compliant. Boundary: it is an expectation-setting passage and discovery resumes later; the calibration set sends it to the arbiter. It predates the new board.

Real call 018 · T042

Case 2 · A direct question before the gap is not a reason to pitch (rule 1)

Early in discovery, the prospect asks what the program is.

WELL EXECUTED

PROSPECT "So I don't know what is your program."

SALES "Before we talk about that, right, like, because this is designed for people with full-time jobs, so that's not a problem, but what I'm asking you is how long have you actually wanted to be an interior designer?"

Why: One sentence on the offer, then straight back to discovery. It is an offer mention, not a pitch start: no pitch before the yes.

Real call 091 · T050–T051

POORLY EXECUTED

PROSPECT "So what is it exactly?"

SALES "So the way it works, it's a six-month mentorship, we start with your foundations, then pricing, then clients... let me share my screen."

Why: The question is answered with a description of three components and a screen share, with no return to discovery. The pitch has started before the gap: non-compliant, score 0.

Illustrative

Case 3 · Step 1: his blocker, in his exact words (rules 2 and 5)

Before the pitch the prospect said: "I need the kind of coaching that's going to help support me in terms of really helping me figure out the marketing and getting the clients, because I'm not great at that." (Real call 001 · T028). Category: Acquisition.

WELL EXECUTED

SALES "What's blocking you today is figuring out the marketing and getting the clients."

Why: His key expression, unchanged, and only this blocker. He recognises his own sentence. One sentence is enough for step 1.

Illustrative (built on the real prospect quote)

POORLY EXECUTED

SALES "So, this is the piece that I see is the biggest missing part for you specifically. Right? It goes back to that chain. You don't have a client acquisition system at all. There's no sales and there's no marketing right now."

Why: The link to him is real, but the blocker is translated into the sales' vocabulary ("client acquisition system", "that chain") and stretched to five sentences. As a step 1 under the new board it would be a paraphrase (K1 = 0). Shown for the wording only: the call predates the board.

Real call 001 · T091

Case 4 · Step 2: one mechanism, no catalogue (rules 3 and 4)

Validated P: "I don't know what to charge." Category: Pricing. The principle text is still to be written by the offer owner, so it appears here as a slot.

WELL EXECUTED

SALES "What makes that give way is [the Pricing principle, one sentence]. That's the [phase of the offer that carries Pricing]."

Why: One mechanism, the one of his blocker, as one sentence he can repeat to his partner, then the phase that carries it. Two sentences. Nothing else is presented before the roadmap.

Illustrative

POORLY EXECUTED

SALES "[Pricing principle]. And on top of that, the Acquisition system will bring you leads... and module 4 is pricing, module 5 is contracts, module 6 is the community."

Why: A second mechanism (Acquisition) and a recitation of the offer content. K2 = 0. The prospect loses the one reason his blocker gives way, and the step is far beyond three sentences.

Illustrative

Case 5 · Step 3: his transformation, his unit, his image (rule 5)

In the gap he said: A "about 2K a month", B "10K a month", no deadline, and he wants to "be home when my kids get back from school".

WELL EXECUTED

SALES "You go from about 2K a month to 10K a month, and you're home when your kids get back from school."

Why: His A, his B, his unit (per month), no date because he gave none, and an image of his life in his own words. K3 = 2.

Illustrative

POORLY EXECUTED

SALES "You go to six figures by next summer."

Why: "Six figures" is the sales' unit, "next summer" is a deadline he never gave, and there is no image of his life. K3 = 0.

Illustrative

Case 6 · Step 4: the closest case, not the best one (rule 6)

The prospect starts from zero clients, with a full-time job. The case library holds a case with that starting profile, with consent recorded.

WELL EXECUTED

SALES "Someone who started exactly where you are, with a full-time job and no clients... [the library case, as recorded]."

Why: A real case, with consent, whose starting point matches his A. He can see himself in it. K4 = 2.

Illustrative

POORLY EXECUTED

SALES "One of our students reached 30K a month." (a real library case, who started as an established architect)

Why: The case is real but it is the best case, not his: the starting point does not match. He does not recognise himself. K4 = 1.

Illustrative

Case 7 · No matching case: leave the slot empty (rules 6 and 9)

The prospect starts from a profile for which the case library holds no matching case.

WELL EXECUTED

SALES (Step 4 not delivered. The sales goes from step 3 to the roadmap.)

Why: The Copilot leaves the slot empty and the sales does not fill it with a story. Step 4 is not judged, its weight is spread over the other items, and the call is counted in Proof gaps so the right proof can be collected.

Illustrative

POORLY EXECUTED

SALES "One of our students hit 40K in her third month."

Why: The case is not in the library. It is a claim outside his gap and the offer: the pitch is non-compliant, score 0. The same applies to "Our students make 15K a month on average" when the figure is not in the offer reference.

Illustrative

Case 8 · The Academy never does his work (rule 9)

P category Acquisition. The sales is explaining what the Academy brings.

WELL EXECUTED

SALES "We give you the system and we review every call you take."

Why: The Academy brings a system, feedback and reviews. He finds and signs his clients himself. Allowed.

Illustrative

POORLY EXECUTED

SALES "We'll find the clients, you just do the design."

Why: "We" find his clients: an outcome promise. Non-compliant, score 0, even if it would help to sign. The same goes for "we close them for you" or "our team delivers the project".

Illustrative

Case 9 · Roadmap first, then the amount (rule 7)

The prospect named other blockers in the gap besides his validated P.

WELL EXECUTED

SALES "Here's your roadmap. Step one for you is '[his next blocker, his words]'... and the last step lands on your 10K a month. Before I tell you the investment, does this order feel right?"

Why: After step 4: his other blockers in his words, the last milestone equal to his B, no price on the page. The amount comes next, then the decision. K6 = 2.

Illustrative

POORLY EXECUTED

SALES "Because the investment is $5,800 USD. Like that is how much it costs to enroll in this program. And I'll show you how everything works."

Why: The price is given before the offer is even presented (the screen share comes ten turns later), so before any roadmap. Under the new board this is an early price: K6 = 0. Real, but from a call that predates the board.

Real call 113 · T184

Case 10 · This pitch is only true for him (rule 8)

Real side: the prospect never said "taste" before the pitch. In the illustrative side, the prospect had said "my friends always ask me to do their living rooms".

WELL EXECUTED

SALES "You told me your friends always ask you to do their living rooms. What's blocking you is that you don't know what to charge them."

Why: His words, his situation, his blocker. Nobody else could hear this exact sentence. The step can reach level 2.

Illustrative

POORLY EXECUTED

SALES "Because a lot of people have taste, like you. They know what looks good. They might even be the go-to person for advice in friends and family."

Why: Generic personalisation: "a lot of people... like you" could be said to any prospect, and "taste" is not his word. A step built like this is capped at level 1 (generic step).

Real call 019 · T145

Case 11 · Adhesion is read in his words, not in his approval (golden rules as a whole)

Both excerpts come after the pitch start, before the decision request.

WELL EXECUTED

SALES "What date exactly?"

PROSPECT "so that would be probably the week of the, of the 24th of August, which means that by the end of August, I will have my first professional concept."

Why: Concrete projection: a date and a first deliverable, in his words. Counts towards K7 = 2. The gesture before it (a precise question) is noted for coaching.

Real call 028 · T265–T266

POORLY EXECUTED

PROSPECT "I mean, it all sounds exactly like what I need, so. I guess it's just my go-to words that I say."

Why: An approval formula that the prospect himself disowns: no component, no projection. Not adhesion. Likewise "what is the cost of this whole program?" is a buying signal, not adhesion.

Real call 105 · T323

8 Edge cases and common confusions

Situation	Decision
A one-sentence answer to "what is the program?", then back to discovery	Offer mention, not a pitch start. It does not make the pitch "before the yes". Repeated mentions stay mentions as long as each is followed by a return to discovery within two sales turns.
Screen share announced ("let me share my screen")	The pitch starts at the announcement if an offer description follows within two sales turns (Real call 091 · T123, description at T125).
Price stated before the pitch start	Recorded as an early price: K6 = 0. The pitch then ends at the first decision request or the end of the call (Real call 113 · T184).

Situation	Decision
Hypothetical amount ("this is not the amount... if I was to tell you the investment's 10K")	Never a price (Real call 006 · T191). A range given for the offer ("somewhere between the $3,000 to $8,000 range") is a price (Real call 006 · T195).
A student's income or a price per project ("around $800 to $1,000 per project")	Not a price (Real call 019 · T177). As a claim, it must come from the offer reference or case library, or be a calculation on his own figures.
The sales computes with an assumed figure ("let's say that you're only charging $1,000 per client")	A calculation is allowed only on his figures or the offer's. A figure he never gave appears on the roadmap as "To ask" and is asked live. (Pattern seen in Real call 040 · T167, where his "10K" is his but the $1,000 is an assumption.)
The gap restitution restated several blockers	The validated P is the selected P of the Gap methodology among them. Only that one is pitched; the others go to the roadmap.
P fits two categories	His words decide: "getting the clients" is Acquisition (Real call 001 · T028; Real call 006 · T066 "where do I start?" with digital marketing is also Acquisition).
Vague P ("having the resources to be able to deliver what I know I can, I'm capable of delivering")	Delivery, because of "deliver" in her words (Real call 078 · T086). Boundary.
P fits none of the nine ("I don't want to do the overthinking and stuff anymore", "I haven't treated it as a need ever")	Category unknown: step 2 not judged, case sent to the arbiter (Real calls 087 · T240 and 049 · T071).
Several blockers in one sentence ("self-doubts... change is scary... not knowing what the next step is")	"Self-doubts" is Skill; the other two fit no category. The validated P decides which one is pitched (Real call 024 · T042).
Lack of money ("close to $3,000. And I don't actively have that on hand right now")	Not a pitch blocker and not Financial risk: a decision fact or an objection (Real call 027 · T047).
A doubt about the market ("AI will replace designers")	Before the pitch: a blocker. After the pitch start: a resistance, handled by the Objections competence.
A projection used to postpone ("I'd rather start in January")	Not adhesion: a reserve, sent to the Objections competence.
The prospect restates what the sales just explained, in answer to "what are you taking away from this?"	Adhesion only if he adds something about his own situation; a pure echo is not adhesion (boundary seen in Real call 004 · T141).
Something he says after the pitch start ("like you said, confidence")	A reaction, never an input for the pitch or the roadmap (Real call 039 · T091–T092).
Scripted pillar text that reuses one of his words ("So most people think that interior design, you have to start the traditional way, right?")	Generic: "most people" plus a list, the reused word "traditional" not tied to what he said. It is no step of his staircase (Real call 004 · T094).

9 Glossary

Pitch · From the first description of the offer (or the screen share) to the first price; otherwise to the first decision request or the end of the call.
Offer mention · An offer description followed within two sales turns by a return to discovery. Not a pitch.
Validated P · The blocker restated in the gap restitution and validated by the prospect; the one blocker the pitch treats.
Key expression · The prospect's own words for an element of his gap, which the sales must reuse to be "verbatim".
Category of P · Which of the nine blockers P belongs to, decided by what he doubts, in his words.
Mechanism · The part of the offer that makes one blocker give way; there are nine, each named after its blocker.
Principle · The mechanism said in one sentence the prospect can repeat (texts to be provided).
Offer phase · The phase of the offer that carries a mechanism (to be provided).
Recitation · Listing three or more components of the offer without tying them to the principle.
Staircase · The four steps in order: blocker, mechanism, transformation, proof.
A / B · His starting point and his objective, with his figures and his unit, taken from the gap.
Image of his life · A concrete scene once B is reached (where he is, what he does, with whom), in his words.
Case library · The real client cases the sales may cite, with consent and starting point recorded (to be provided).
Starting point · Where a client case began (unit and value, or a profile such as "full-time job, zero clients"), compared with his A.
Proof gaps · Calls where no matching case existed; tells which proof to collect first.
Roadmap · His one-page client page: his other blockers as steps, valued with his figures, no price.
"To ask" · A figure missing from the roadmap, to ask the prospect live.
Claim · A figure, client case, price or guarantee stated by the sales during the pitch.
Outcome promise · Saying the Academy will run his business, find or sign his clients, or deliver his projects.
Non-compliant · Pitch before the yes, a claim outside his gap or the offer, or an outcome promise: score 0.
Generic step · A step that could be said to any prospect; capped at level 1.
Adhesion · The prospect takes the solution as his own, projects himself concretely, or makes a new link himself.
Buying signal · A price or logistics question without projection; not adhesion.
Copilot · The sales' live assistant: it blocks the pitch until the gap is validated, picks the mechanism, leaves the proof slot empty when no case matches.

10 Open points

- **Mechanism contents (à confirmer, offer owner):** the principle in one sentence, the offer phase and the typical words of each of the nine mechanisms.
- **Case library (à confirmer):** the cases, client consent, the starting point of each case, and the matching rule (same dimension as A, starting value within a factor still to define).
- **Severity of the compliance gate:** score 0 (current rule) or a cap at 40.
- **Weights** of the seven items (15 / 20 / 15 / 15 / 10 / 15 / 10) and the limit of one to three sentences per step (tolerance), to be validated. The principle limit (25 words or fewer) and the recitation threshold (three components) are also to be validated.
- **Roadmap:** the order in which the blockers must fall; whether the blocker treated in the pitch is also a roadmap step; the meaning of the check "no link".
- **Taxonomy:** four of the seven real blockers in the calibration set fit none of the nine categories (fear, overthinking, "not treating it as a need", "not knowing the next step"). To decide with the offer owner.
- **No real calibration yet** for steps 1 to 4 and the roadmap: to build from the first calls made with the new board.
