Objection Removal

Prevent what can be anticipated before the price, and remove every resistance raised until the prospect, in his own words, no longer holds it.

Version: Memo 1.0 · 25 October 2026

Based on: Objection Removal scoring methodology v1.1 (draft for validation), Annex A bounding rules, Annex B calibration set

SOURCE OF TRUTH

---

1 In one sentence

> Objection Removal is the sales' ability to **prevent** the resistances that can be anticipated (decision circuit, budget, timing, a past failure) before the price, and to **remove** each resistance the prospect raises, with the gesture that fits its nature, until the prospect states that it no longer holds.

A resistance is one of three things, and they call for opposite gestures. An **objection** is a doubt about the offer, its price or terms, the company, the sales, or a resource the prospect lacks. An **anxiety** is a doubt about himself: his capability, or his choice. An **inertia** is attachment to the present, or a postponement with no external reason.

The sales succeeded when every resistance was named for what it is, received the matching gesture, was received without contradiction and explored before being answered, and ended with the prospect saying in his own words that it was resolved, without coming back later. And when the decision circuit and budget were known before the price.

2 Its role in the call

Where it sits. It is the last of the four competences, but it is not only the end of the call. Prevention happens during discovery and before the first price. Handling happens wherever a resistance appears, most often after the price, sometimes during the pitch, and it continues in the follow-up and decision calls of the same cycle.

What it receives. From SPIN and the Gap: the prospect's own words about his problem, its cost and where he wants to go. These are the raw material of every answer: an inertia is answered with the cost the prospect already named, an objection with what he said while exploring it. From the Pitch: a presentation built on his blocker. A resistance that the pitch should have removed comes back here.

What it hands to the decision. A prospect with no open resistance, who has said so himself, and a known decision circuit. That is the condition for a decision today, or for a dated follow-up that will not dissolve into "I'll think about it".

Why the call fails without it. Treating an anxiety as an objection means arguing against someone who doubts himself: the surest way to lose a sale that was already won. Treating an inertia as an objection answers a question the prospect never asked. And a resistance received and left without a reaction is not gone: it is latent, and it is the one that comes back as "I'll think about it".

> **The pitch boundary: "what if it doesn't work?"**
> The same doubt does not belong to the same competence depending on *when* it is said. Stated by the prospect **before the pitch start**, during discovery, the risk that the investment does not pay off is a pitch blocker, category **Financial risk**: the gap restates it and the pitch must answer it with its mechanism. Stated **after the pitch start** (during the presentation, after the price, or in a later call), it is a resistance handled here. The line is the pitch start, not the price: a statement after the pitch start "can be a reaction or an objection, never an input" for the pitch (PB-10), and the same split is written for market doubts (PB-22). A lack of money to pay for the program is never a pitch blocker: it is a decision-circuit fact or an objection, handled here (PB-27).

3 What it is for

For the prospect. He is heard on what actually holds him back, not on what the sales assumes. A self-doubt is met with support, a fear of choosing wrong with proof, a hesitation to move with the cost of staying where he is, in his own words. He leaves without an unspoken reserve.

For the sales. A reliable way to know whether a resistance is gone: the prospect said so. A method that replaces arguing with exploring. And a habit of prevention that removes most "I need to talk to my husband" and "I don't have the budget" before they appear.

For the decision. A decision taken with no open resistance is a decision that holds. A resistance that was only acknowledged ("okay", "I see") or left latent is the most frequent reason a sale turns into a ghosted follow-up. Prevention matters because a resistance avoided is worth more than a resistance removed.

4 The golden rules

1. **Name the nature before choosing the gesture.**
   Ask what the prospect doubts, with three tests in this order. (1) The offer, its price or terms, the company, the sales, or a resource he lacks (time, money, a co-decider's agreement)? Objection. (2) Himself (not managing, not lasting)? Anxiety · capability. His decision (choosing wrong, being fooled)? Anxiety · choice. (3) Attachment to the present, or postponement without an external reason? Inertia. "I'm not sure it works" is an objection; "I'm not sure I can do it" is an anxiety; "it's fine as it is" is an inertia (OB-3).

2 **Not every hesitation is a resistance.**

A request for information ("how long is it?"), a conditional acceptance ("if I can pay monthly, then yes"), a decision-circuit fact stated neutrally ("my husband handles the money") and a delay with an external, verifiable reason ("I'm moving in January", which is a deadline) are not resistances. Treating them as objections creates the resistance you were trying to avoid (OB-2).

3 **Receive it without contradiction.**

The first sentence of the first answer receives the resistance: "I hear you", "that makes total sense", a neutral reformulation, or an open question about it. No "but", no "actually", no "no,", no counter-argument in the first sentence (OB-13).

4 **Isolate, then explore, before answering.**

For an objection, check that it is the only thing in the way ("Apart from the money, is there anything else that would stop you?") before any answer, then ask an open question about the resistance itself ("a lot compared to what?") and let the prospect answer with content. For an anxiety or an inertia, isolating is not required; exploring is (OB-14, OB-15).

5 **Use the gesture of its nature.**

Objection: an answer (information, proof, reframing) tied to what the prospect said while exploring. Anxiety · capability: describe the support, framework, steps or accompaniment that remove the risk of not managing; never argue price or content. Anxiety · choice: proof (comparable students' results), reversibility, guarantee. Inertia: a question that leads the prospect to state the cost of staying where he is, in his own words, ideally quantified (OB-16).

6 **Stay on it until the prospect reacts.**

Never receive and leave. If the topic changes within two turns of the resistance and the prospect has not reacted, the resistance is latent, even if the sales' turn was long and warm (OB-10, OB-22).

7 **The resolution is said by the prospect.**

Resolved means the prospect states, in his own words, that it no longer holds, reformulates it as answered, or moves forward on his own (asks how to start, proposes a date). "Okay", "I see", "makes sense" is only acknowledged. A resolution first stated by the sales and approved ("so the payment plan works for you, right?" → "yeah") is only acknowledged. A commitment in his own words to an answer the sales proposed, with a specific element ("You have a deal", "Thursday 7 pm works for both of us"), is resolved (OB-17, OB-23).

8 **A resistance that comes back was never resolved.**

The same nature and theme raised again later in the call, or in the next call of the cycle, is a recurrence: the earlier "resolution" was not one (OB-11).

9 **Prevent before the price.**

Before the first price, get the prospect to state who decides, who weighs on the decision, his budget or financial capacity, and his deadline; and when he mentions a failed past attempt, explore what did not work and say what is different this time. A sales supposition answered "mm-hmm" establishes nothing (OB-18, OB-19).

5 Exclusion rules

Never counts as…	Case	Example
a resistance	A request for information, unless the prospect states a reserve in the same turn	"How long is the program?" (but "How long is it? Because honestly I don't have much time." is an objection · time)
a resistance	A conditional acceptance: it is a decision criterion	"As long as I can, you know, make it work financially."
a resistance	A decision-circuit fact stated neutrally during discovery. It becomes an objection only when put forward as a reason not to decide now	"My husband handles our finances." (discovery) vs "I need to talk to my husband first." (after the price)
inertia	A delay with an external, verifiable reason: it is a decision-circuit deadline and feeds prevention	"Not before January, I'm moving in December."
inertia	"I'll think about it" with a stated reason: it is classified by the reason	"I need to sit and work my numbers" → objection · money available
acknowledged by the sales	A first sentence that contradicts or argues	"No, we've only got 100 students..."; "But think about what it's costing you..."
isolation	"Anything else?" asked after the answer, at the end of the episode	Sales explains the payment plan, then: "Anything else?"
exploration	A closed question, or a question unrelated to the resistance. An open question that refers back to it by ellipsis, right after it, does count (OB-20)	"Does that make sense?" does not count; "Compared to what?" right after "that's a lot" counts
a matching gesture	A gesture of another nature: price or content arguments against an anxiety, features against an inertia, a regret question against an anxiety · choice	"I always give up" → "The price is really low compared to a degree"
resolved	Plain agreement; agreement to a resolution stated by the sales	"Okay, I understand. Okay."; "So it works for you, right?" → "Yeah."
resolved	Any resistance that recurs later in the call or in the next call of the cycle	"It's a lot of money" resolved in call 1, back in call 2
handled (not latent)	A single sales turn that receives the resistance and moves on, with no prospect reaction	"I totally understand where you're at. Let's just do this. Share screen."
prevention	Facts stated after the first price; sales suppositions confirmed without content	"I assume you make the decisions?" → "mm-hmm"

Evidence principles common to the four competences: every verdict rests on exact quotes from the transcript, by the right speaker, at the right place. An approval ("yes", "exactly", "for sure") proves nothing but an agreement. Content the sales said and the prospect only approved never counts as the prospect's words. A top level needs two distinct quotes.

6 How to judge it from a transcript

1. **Place the first price.** The first sales passage stating an amount for the offer (full price, instalment, deposit, discount). A student's income, a price per project or an amount quoted by the prospect is not a price. Everything in prevention is dated against this turn.
2. **Read prevention before that turn.** Look for the prospect's own statements of: who decides; who else weighs on the decision; his budget or financial capacity; a binding or wished deadline; and, if he mentioned a failed past attempt, whether the sales explored it and said what differs this time. Discard sales suppositions answered without content.
3. **List every resistance in the whole call.** Scan prospect turns for doubt, fear, delay, lack of money or time, a third party. Then remove what is not a resistance (rule 2). A co-decider present on the call raises resistances like the prospect.
4. **Name the nature of each one** with the three tests in order. A word like "scared" only nominates: "I'm scared of doing this step because of the money" is an objection, because test 1 comes first. One passage with two natures opens two episodes; an explicitly denied nature opens none.
5. **Bound the episode.** It starts at the resistance. The response is every sales turn until the topic changes: a sales turn that reuses no word of the resistance or of the answer and opens a new subject (a new discovery question, a new offer segment, logistics, the close). The reaction is the prospect's turns in between. A new resistance inside the episode ends it and opens a new one.
6. **Read the gestures.** First sentence of the first answer: received or contradicted? Before any answer: isolated? An open question about the resistance, and did the prospect answer with content? Then: does the answer use the gesture of the nature, partly, or another one?
7. **Read the resolution on the prospect's words only.** Resolved, acknowledged, persisting, or latent (topic change within two turns, no prospect reaction of six words or more). Check whether the "resolution" was first stated by the sales.
8. **Check recurrence.** Does the same nature and theme come back later in the call, or in the next call of the cycle? If so, the earlier episode loses its "no recurrence" point.

What the verdict looks like

Call score = 70 % handling + 30 % prevention when both apply; otherwise the one that applies, on 100. Weights are proposals, to be validated.

Handling item (per episode)	Weight	Level 0	Level 1	Level 2
H1 Right gesture	25	Gesture of another nature	Partial match	Gesture of its nature
H2 Acknowledge	10	Contradiction or defence in the first sentence	—	Received without contradiction
H3 Isolate and explore	20	Neither	One of the two	Both, and the prospect answered the exploration with content
H4 Resolution	35	Latent or persisting	Acknowledged	Resolved, in the prospect's own words, not prompted

Handling item (per episode)	Weight	Level 0	Level 1	Level 2
H5 No recurrence	10	Recurs later in the call or next call	—	Does not recur

Each item is scored 0, 1 or 2; the episode score is the sum of weight × level / 2. For an anxiety or an inertia, H3 reads "explore" only: 2 if explored and answered with content, 1 if explored without content. The handling score is the mean of episode scores, where anxiety and inertia episodes weigh 1.5 and objection episodes 1 (to be validated). H5 stays provisional until the next call of the cycle is analysed or the cycle closes.

Arithmetic example: an objection received well (H2 = 2), right gesture (H1 = 2), explored with content but not isolated (H3 = 1), ending in "okay, makes sense" (H4 = 1), not recurring (H5 = 2): 25 + 10 + 10 + 17.5 + 10 = 72.5.

Prevention item (per call)	Weight	Level 0	Level 1	Level 2
R1 Decision circuit	40	Neither decision maker nor influencers known before the price	One of the two	Both stated by the prospect before the price
R2 Budget and deadline	40	Neither	One of the two	Budget stated by the prospect and a deadline, before the price
R3 Past attempt defused	20	A failed attempt mentioned and not addressed before the price	Explored, but what differs not stated	Explored and the difference stated before the price; or no past attempt mentioned

When it applies. At least one resistance: handling is scored, and prevention too if a price was given. No resistance but a price: the call score is the prevention score (to be validated). No resistance and no price: not applicable. There is no compliance gate in this competence: nothing forces the score to zero.

Mastered · 85 to 100
Executed correctly on almost every call.

Developing · 60 to 84
Executed, with recurrent gaps.

Needs work · below 60
Not executed reliably.

Floor rule. Over a period, if any item reaches level 2 in fewer than 25 % of the evaluable calls, the level cannot be above Developing, whatever the score.

7 Practical cases: well executed vs poorly executed

Real excerpts are copied exactly from SKL call transcripts, transcription errors included, with call and turn. Illustrative excerpts are written for this memo and labelled as such.

Case 1 · Anxiety about capability: support, not a pep talk

Rules 1 and 5. Both prospects doubt themselves, not the offer.

WELL EXECUTED

PROSPECT "I think it would be having my first client and not knowing what to do after they pay me. That would scare me more."

SALES "that's exactly why the support doesn't stop when you get your first client." ... "So you're not going to be left alone when the pressure is at the highest point."

Why: Anxiety · capability answered with the support that removes the risk of not managing. Right gesture, level 2.

Real call 019 · T210–T213

POORLY EXECUTED

PROSPECT "I'm just scared that I might not be able to get a client and then there's going be no, no incoming money."

SALES "And I can understand that, right? It is scary." ... "Which voice do you need to be listening to?"

Why: Well received, but the answer only reframes the belief: no support, framework or proof. A mindset reframe is a partial match (H1 = 1); adding the follow-up and mentoring in the same episode would make it full. Arguing price here ("the price is really low compared to a degree") would be level 0.

Real call 038 · T254–T255

Case 2 · Anxiety about choice: proof, not regret

Rules 1 and 5. The prospect fears making the wrong decision.

WELL EXECUTED

PROSPECT "How can you make sure this investment will give me that?"

SALES "Fair question. What would you need to see to feel sure?" ... "Here is someone who started where you are, and here is how the guarantee works."

PROSPECT "Okay, if that's covered, I'm not taking the risk alone."

Why: Explored, then answered with proof and a guarantee from the offer reference. The prospect states in his words that the risk no longer holds.

Illustrative

POORLY EXECUTED

PROSPECT "And now I really want to make sure that this investment will give me that. But how can you make sure?"

SALES "what do you think you would regret more in, say, 10 years from now?"

Why: The regret question is the inertia gesture. A fear of choosing wrong expects proof, reversibility or a guarantee. Mismatch, H1 = 0.

Real call 030 · T308–T309

Case 3 · "I need to think" with a reason is not inertia

Rules 1 and 2. The prospect said: "What I'm going to do is I need to sit and work my numbers. You know, coming here, like I said, we went into all our savings, everything to come here." (Real call 050 · T263)

WELL EXECUTED

SALES "That makes sense, you put your savings into this. Apart from the numbers, is there anything else?" ... "What would the numbers need to look like for this to work?"

Why: Classified by its reason: objection · money available. Received, isolated, explored on the prospect's own words (savings, numbers).

Illustrative

POORLY EXECUTED

SALES "If you go home and think, nothing changes. Where will you be in a year?"

Why: Treats a money objection as inertia: it answers a hesitation the prospect does not have and skips the real constraint.

Illustrative

Case 4 · Receiving without contradiction

Rule 3. Objection · trust in the offer.

WELL EXECUTED

PROSPECT "27 reviews is not a lot, I don't trust it 100%."

SALES "That's totally fair. What would make you trust it?"

PROSPECT "Talking to someone who did it."

Why: Received first, then explored. The prospect names what would answer the doubt, so the answer can be tied to it.

Illustrative

POORLY EXECUTED

PROSPECT "that don't make me like trust like 100% because 27 is not like a lot of review."

SALES "No, we've only got 100 students and we don't beg our clients to leave reviews."

PROSPECT "Okay, I understand. Okay."

Why: The first word is "No": not acknowledged (H2 = 0). The prospect's "Okay, I understand" has no content: acknowledged, not resolved (H4 = 1).

Real call 005 · T242–T244

Case 5 · Isolating before answering

Rule 4. Objection · co-decider (a third party put forward as a reason not to decide now).

WELL EXECUTED

PROSPECT "Okay, that sounds doable. That sounds doable. Can I still run it by my financial advisor?"

SALES "Like I said, you can do whatever you like. Is that the only thing left?"

PROSPECT "That's the only thing."

Why: No contradiction, and the sales checks it is the only obstacle before answering. The prospect confirms: isolation done.

Real call 041 · T230–T232

POORLY EXECUTED

SALES "Sure. Your advisor will see the payment plan is very reasonable, it's only 900 a month, and the support is there from day one... Anything else?"

Why: The answer comes first; "anything else?" at the end of the episode is not isolation. Another hidden reserve can surface after all the arguments are spent.

Illustrative

Case 6 · Exploring the resistance itself

Rule 4. The prospect doubts the sales' motive.

WELL EXECUTED

PROSPECT "I'm not overwhelmed, but I know that like, it's a bit of a sales thing too, to be honest."

SALES "What makes you say it's a sales thing?"

PROSPECT "So for each person you get, I'm sure you're making something if you sign up right away."

Why: An open question on the resistance, reusing its words; the prospect answers with content. Now the sales knows what to answer.

Real call 087 · T488–T490

POORLY EXECUTED

PROSPECT "Okay. That's, that's a lot."

SALES "Compared to?"

PROSPECT "It's, it's, that, that, that is a lot, to be honest."

Why: "Compared to?" right after the resistance counts as exploration and as received (OB-20). But the prospect answers without content and repeats the resistance: persisting (H4 = 0). The sales has to stay on it, not move on.

Real call 050 · T219–T221

Case 7 · Receiving and leaving: the latent objection

Rule 6. Objection · price, early in the call.

WELL EXECUTED

PROSPECT "It's just such a significant investment."

SALES "I totally understand. Significant compared to what you have available, or compared to what you expect from it?"

PROSPECT "Compared to what I have. I have about 3,000 saved."

Why: Received and explored; the prospect reacts with content (and states his financial capacity). The episode stays open until it is answered.

Illustrative

POORLY EXECUTED

PROSPECT "It's just such a significant investment so that that's."

SALES "I totally understand where you're at. Let's just do this. Share screen."

Why: One turn receives it and changes the subject; the prospect never reacts. Latent (H4 = 0). It is the resistance that comes back as "I'll think about it".

Real call 044 · T051–T052

Case 8 · Resolution in the prospect's words vs approved by the prospect

Rule 7. Two moments of the same call.

WELL EXECUTED

PROSPECT "So this is the thing, the $2,000 is not available, that's required for me to do the purchase the house."

SALES "We can just do the entire $5,800 on split it, and then it comes out to $967."

PROSPECT "Okay. That's not bad. I have a quick question because that's not bad at all."

Why: The prospect says in her own words that the plan works, unprompted. Resolved (H4 = 2).

Real call 020 · T306–T314

POORLY EXECUTED

PROSPECT "I don't want to do it today. What's this? I'm going say July. Can I start my classes in September?"

SALES "So you want to sign up now, but only start in September? Is that what I'm hearing?"

PROSPECT "Yes. that's fine. Okay. Okay, cool."

Why: Inertia (a postponement with no reason given). The solution was formulated by the sales and only approved: acknowledged, not resolved (H4 = 1).

Real call 020 · T238–T240

Case 9 · Committing to a proposed answer

Rule 7. The sales proposes a concrete answer; what matters is how the prospect takes it.

WELL EXECUTED

PROSPECT "So that's the reason why I would rather pay installments, go through the first, I don't know, eight weeks, right? And then see how everything goes."

SALES "we can start with a $1,000, and this is U.S., $1,000 deposit, fully refundable."

PROSPECT "You have a deal."

Why: The sales proposed a solution, he did not state the resolution for her; she commits in her own words. Resolved (OB-23).

Real call 028 · T362–T380

POORLY EXECUTED

SALES "So the payment plan works for you, right?"

PROSPECT "Yeah."

Why: The resolution is the sales' sentence; the prospect only approves. Acknowledged. The question to ask is open: "How does that sit with you?"

Illustrative

Case 10 · Inertia: the cost of staying, said by the prospect

Rules 1 and 5. The prospect is attached to the present, with no external reason.

WELL EXECUTED

PROSPECT "Maybe after the holidays, it's not the right time."

SALES "If nothing changes until then, where are you in January?"

PROSPECT "Same place, still stuck in this job, another 3 months lost."

Why: The prospect states the cost of doing nothing himself, quantified. Matching gesture (H1 = 2).

Illustrative

POORLY EXECUTED

PROSPECT "I'm good for now. I promise you I am."

SALES "Totally. And just so you know, the program also includes a full library of templates and a community."

Why: "I'm good for now" is an inertia (real call 056 · T073). Answering with features answers a question the prospect did not ask. Mismatch.

Illustrative response to real call 056 · T073

Case 11 · A resistance that comes back

Rule 8. Earlier in the call the prospect said: "No, I'm not scared. Not scared, because I dove into this course already, like in the past. But it's just the amount." (Real call 038 · T212)

WELL EXECUTED

SALES "Before we look at how to start: on the amount, where are you now?"

PROSPECT "Honestly with the instalments it's fine, it's not the issue anymore."

Why: The sales checks the earlier resistance before the close; the prospect states it no longer holds. Nothing recurs.

Illustrative

POORLY EXECUTED

PROSPECT "This is very expensive, of course."

SALES "Compared to the $200,000 you've lost over the last five years by not doing anything?"

PROSPECT "No, I can't make decisions instantly."

Why: Same nature and theme as T212: a recurrence, so the earlier episodes take H5 = 0. "I can't make decisions instantly" is a new resistance, not a reaction.

Real call 038 · T338–T340

Case 12 · Prevention: the decision circuit, stated by the prospect

Rule 9. Both before the first price.

WELL EXECUTED

SALES "do you feel like this is a decision you can make independently or do you feel like you need your husband to be involved?"

PROSPECT "He does not get involved in the decisions that I make for myself." ... "So do I need to ask him? Yes. But will he stop me? No."

Why: An open question; the prospect states the decision maker (herself) and the influencer (her husband) before the first price (T257). R1 level 2.

Real call 075 · T251–T252

POORLY EXECUTED

SALES "Assuming that your husband is like the man of the house, he takes care of the bills, he makes sure everything is paid, everything is fine, correct?"

PROSPECT "Yes."

Why: A sales supposition answered "Yes" establishes nothing. In this call it was saved later, still before the price, by the prospect's own words: "I ask him because he knows more than me about that kind of stuff, but it's my final decision." (T074).

Real call 005 · T053–T054

8 Edge cases and common confusions

Situation	Decision
"I'm scared of doing this step because of the money, you know?" (real call 090 · T175)	Objection · money available. "Scared" only nominates; test 1 (a resource he lacks) comes first.
"I can't afford it and honestly I'm scared I'll quit again." vs "No, I'm not scared... But it's just the amount." (real call 038 · T212)	Two natures: two episodes from the same turn, each judged on its own gesture. An explicitly denied nature opens no episode: one objection · price.

Situation	Decision
"the biggest fear is to make a mistake that I can't come back from." (real call 014 · T080)	Anxiety · choice, not capability: the doubt is on the decision (she says in the same turn she can figure out anything).
"In four weeks, I'm moving…" (real call 059 · T312)	Not a resistance: a deadline with an external, verifiable reason. Feeds prevention (R2).
"it's wedding season, I'm booked until October"	Two records: a deadline for prevention, and an objection · time for handling.
"I know that from mid-September through March, we basically don't breathe." (real call 065 · T084)	Objection · time (bandwidth lacking), not a postponement.
"Do you offer the possibility to pay increments…?" then "if I make three payments, I end up paying more" (real call 068 · T234, T236)	The first is an information request; the second is a separate candidate (objection · price of instalments).
"As long as I can, you know, make it work financially." (real call 001 · T108)	Conditional acceptance: a decision criterion, not a resistance.
"I do have full autonomy… He's a numbers man." in discovery (real call 010 · T104)	Neutral circuit fact: feeds R1, opens no episode. "I need to talk to my husband first" after the price is an objection · co-decider.
The isolation question is answered with a new fear: "it's the fear of just being like, well, here goes nothing." (real call 002 · T165)	Isolation counts. The money episode ends; a new anxiety · capability episode starts.
"Compared to what?" answered by "let me ask my fiancé about this" (real call 008 · T151–T152)	Exploration asked, answered without content; the answer opens a new episode (objection · co-decider).
"what if it doesn't work?" in discovery vs after the pitch start	Before the pitch start: pitch blocker, Financial risk. After: a resistance handled here (callout, section 2). Same split for a market doubt such as "AI will replace designers".
"I'd rather start in January when the wedding season is over" during the pitch	Not adhesion to the pitch: a reserve routed here, as inertia or deadline depending on the reason.
"how much do have on your savings right now?" → "$12,000." before the price (real call 105 · T144–T145)	Budget stated by the prospect: counts for R2.
Resolved in call 1, same theme back in call 2	Call 1 takes H5 = 0 once call 2 is analysed; until then H5 is provisional.

9 Glossary

Resistance	An objection, an anxiety (capability or choice) or an inertia, as defined in section 1.
Past attempt	A failed earlier course or attempt. Not a resistance, but it predicts one: used for prevention.

Episode	The resistance, the sales' response until the topic changes, and the prospect's reaction.
Acknowledge / Isolate / Explore	Receive without contradiction / check it is the only obstacle, before answering / ask an open question about the resistance itself.
Topic change	The first sales turn that reuses nothing of the resistance or the answer and opens a new subject.
Recurrence	The same nature and theme raised again after its episode ended, in the call or the next call of the cycle.
Matching gesture	The answer of the resistance's nature: answer, support, proof, or the cost of inaction in his words.
Mindset reframe	Reframing a belief behind an anxiety without describing support or proof: a partial match.
Resolved / Acknowledged / Persisting / Latent	The prospect says it no longer holds / agrees without content / repeats it / never reacts before the topic changes.
Prompted resolution	A resolution first stated by the sales and only approved: counts as acknowledged.
First price	The first sales passage stating an amount for the offer. The date line for prevention.
Decision circuit	Who decides, who influences, the budget and the deadline.
Deadline	Binding (an external, verifiable event) or wished (a horizon the prospect gives).
Pitch start	The first statement describing the offer, or the start of the program screen share. The line between a pitch blocker and a resistance.

10 Open points

- **Weights to be validated:** the 70 / 30 split; episode weights 25 / 10 / 20 / 35 / 10; the 1.5 weight of anxiety and inertia episodes; the latent rule. Also: whether a call with no resistance scores prevention alone.
- **Calibration cases superseded by later rules** (this memo follows the later rules). Annex B case 17 (call 038 · T254): H1 = 0 and arbiter in the annex; partial match, H1 = 1, under the mindset-reframe rule (OB-21). Case 24 (call 050 · T219): "Compared to?" is not an exploration in the annex; it is one, and counts as received, under OB-20 (verdict "persisting" unchanged). Case 13 (call 008 · T148): the note that "Compared to what, though?" alone fails the reuse test no longer holds under OB-20. The exclusion "a question that does not reuse the resistance" (X7) must be rewritten accordingly.
- **"What if it doesn't work?"** Listed as an anxiety · choice marker, while the first boundary test makes a doubt that the program works an objection · trust. Which wins is to be validated.
- **Discovery anxieties.** Annex B case 2 (call 019 · T072, "Maybe I'm afraid of not making it.") opens an episode here, though stated before the pitch start, where the same fear can be the gap's validated problem and a pitch blocker. Whether it is scored in both competences is to be validated.
- **Two quotes for top level:** how it applies to the yes/no items (acknowledge, no recurrence) is not written. **Partial gesture on an objection:** only defined by the mixed-argument example.
- **Inputs still missing:** the offer reference (payment options, guarantee, refund terms) and the case library; blind confirmation of the calibration verdicts by two certified annotators.
