Key Result Memo

KEY RESULT 2.1

Hold 5 qualified live calls per day and per sales rep in December

This key result belongs to objective O2, **Build a world-class marketing engine that makes guru #1 the obvious choice in its market**. It is owned by **Amin**, who is accountable for the number. The **baseline is about 3** live calls held per working day by our one closer, only about one in three of them qualified. Measurement covers **December 2026**: October and November are used to define a qualified call, build reliable tracking and launch the new VSLs. The target is **5 qualified live calls per working day and per sales rep**, on average across December. It is a **committed** key result: 100% is expected.

1 What we measure

After reading this section, anyone on the team knows exactly what we are aiming for.

The key result in one sentence

In December, each sales rep holds on average 5 first sales calls a day with prospects who meet all four qualification criteria.

How we calculate it

We divide the number of qualified live calls held in December by the number of rep-working-days in December: the Mondays to Fridays on which a closer is scheduled to take calls, excluding public holidays and leave. A new closer counts from the first day they take calls on their own; the setter is not a sales rep for this count. A call counts when the prospect shows up to the 60-minute video call, it is the first sales call with that prospect, and the closer confirms in the Data OS that the prospect meets all four criteria. No-shows, follow-up calls and phone calls do not count, and a rescheduled call counts once, on the day it is held. The figure is final on December 31.

As a starting point, a prospect is qualified when all four conditions are met: they know what the program offers and what it asks of them; they know it is a $5,900 investment and can pay it, with their own money or through BNPL financing they can be approved for; they have a real pain or desire the program addresses; and they are willing to dedicate a few hours a week to it. The application form and the setter check these before booking, and the closer confirms them in the first minutes of the call. This draft is validated by sales and marketing in milestone 1; KR 3.3 uses the same criteria to define a forced sale.

Milestone 1 builds reliable tracking in the Data OS: every call is tagged held or no-show, qualified or not, the day it happens, and Amin checks the figure before each weekly review, so that two people reading the same data always get the same number.

What we will not sacrifice

We will never count a call as qualified to hit the number: once validated, the four criteria only change through the change log. We will not fill the calendar with volume bought at any price: a qualified call stays at or below $300 (KR 2.2). And because a loose definition of qualified shows up later as lost deals and refunds, the closing rate on qualified calls stays at or above 35% (KR 3.2) and refunds below 3% (KR 3.3).

2 Why and how

After reading this section, anyone understands why this key result matters now and how we plan to reach it.

Why now

The qualified live call is where marketing hands over to sales: it shows whether our marketing engine brings the right people. At 5 a day over December's 23 working days, our closer holds about 115 qualified calls; at the 35% closing rate of KR 3.2 and a $5,900 offer, that is around 40 sales and $236k, which is what makes the 200k of cash collected in KR 3.1 reachable. Today, with one call in three qualified, a qualified call costs us around $360, above the $300 ceiling of KR 2.2, and two hours out of three on the closer's calendar go to people we cannot help. A closer cannot hold much more than 6 sixty-minute calls a day, so almost every call on the calendar has to be qualified. If we fail, December cash falls short.

Our bets

Our first bet is the archetype the VSL speaks to. The VSL is the first domino of the funnel, and today it speaks to anyone with a passion for interior design, so it attracts everyone and no one. If the VSL speaks to people who already carry part of the identity

of an interior designer, more of the people who book are qualified and more of them show up, because they recognize themselves in it and arrive knowing why they are on the call. To test it, milestone 2 puts the two new VSLs on this archetype live; a third, for interior designers already in business but stuck in feast-or-famine mode, is in preparation for a more advanced archetype. We will know we are wrong if, two weeks after the new VSLs are live, fewer than half of the calls held are qualified or the show rate is still around 40%.

Our second bet is the gate before the calendar. If the setter checks every application against the four criteria before booking, and every booked call gets a confirmation and reminder sequence, unqualified prospects stop reaching the closer and more of the right ones show up, because a prospect who has been checked and reminded is more likely to fit and to come. To test it, we will turn the criteria into a setter checklist and put live a reminder flow tested on 20 bookings. We will know we are wrong if, two weeks later, the closer confirms the setter's qualified bookings no more often than before, or the show rate stays below 50%.

What we will not do

This quarter, we deliberately will not double down on the current passion-based messaging and VSL, buy lower-quality leads or broaden targeting just to fill the calendar, overbook the closer or shorten the calls, or hire more closers to make up for a funnel that does not yet produce qualified calls.

3 Who and when

Completed from the first two proposed milestones.

Who contributes what

Amin owns the key result, writes the new VSLs, owns the qualification criteria and reviews the figure and its tags each week. **Michael**, the marketing lead, puts the new VSLs live, runs the ads that feed it (KR 1.1) and tracks show and qualification rates for each VSL. **Liam**, the setter, checks every application against the criteria before booking and confirms every booked call. **Valentino**, the closer, holds the calls and tags each one the same day. The **Data OS** owner builds the tracking view. The main dependency: a qualified call must mean the same thing to Michael, Liam and Valentino, which also makes KR 2.2, 3.2 and 3.3 reliable.

Trajectory and 13-week milestone roadmap

Milestone 1 By Sunday 8 pm of its scheduled week, the four qualification criteria are written and validated by Michael, Liam and Valentino, and the Data OS shows every call booked that week, per rep and per day, held or no-show and qualified or not (KR 2.1, KR 2.2, KR 3.2). Done = criteria v1 shared, tracking view live, 100% of the week's calls tagged.

Milestone 2 By Sunday 8 pm of its scheduled week, the two new VSLs built on the interior-designer-identity archetype share 100% of guru #1's funnel traffic, with the application and the call framed around the four criteria, and their show rate and share of qualified calls are compared in the Data OS with the old VSL's last four weeks (KR 2.1, KR 2.2). Done = both VSL links live, first week's rates logged per VSL.

The week of each milestone is not fixed yet: it will be set once all the milestones of the quarter are scheduled together. Milestone 1 must land in October, to measure the new VSLs against a reliable baseline, and milestone 2 by mid-November, to leave two weeks of data and one iteration before December 1. From milestone 1 onward, we read the figure every week as a trend. At week 13, the December average is at or above 5.

Warning signals

If, two weeks after the new VSLs are live, fewer than half of the calls held are qualified, the next iteration or the feast-or-famine VSL becomes the first priority and the setter gate starts the following week; if the show rate is still below 50% at the end of November, the reminder flow does. If the cost per qualified call goes above $300, ad spend stops scaling until the cause is found (KR 2.2). If the closing rate on qualified calls drops below 35%, the criteria are reviewed at the next weekly review. If the last two weeks of November average below 4 qualified calls a day, the December plan is reviewed the following Saturday. If the closer's calendar is full most days, a second hire goes on the agenda.

Change log

[Empty. Memo frozen as v1 at the next weekly review.]
